# NASA sUAS Vehicle Technologies

## STEReO Stakeholder Workshop

**Robert McSwain, AST, Aerospace  
Flight Systems**

**Feb 11-13, 2020**

(757).864.9639

[Robert.G.McSwain@NASA.gov](mailto:Robert.G.McSwain@NASA.gov)

# Outline

- **Safe2Ditch**
- **ICAROUS- Independent Configurable Architecture for Reliable Operations of Autonomous Systems**
- **Safeguard**
- **RAAVIN – Radar on Autonomous Aircraft to Verify ICAROUS Navigation**
- **DANTi – Detect and Avoid iN The Cockpit**
- **UTM Enabling Vehicle Technologies**
- **HDS – Human Detection System**

# Safe 2 Ditch (S2D)

- S2D is designed to enable sUAS to self-monitor the vehicle state and effectively execute emergency landings in populated areas.
- Features
  - Machine Vision
  - Health Monitoring
- Additional Information
  - <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20180008439.pdf>

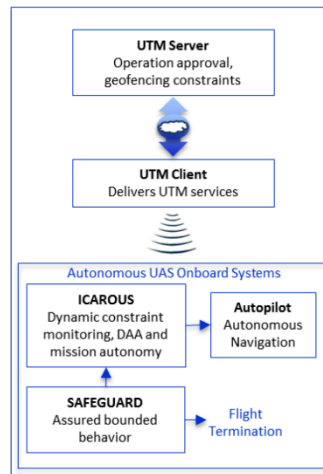

# Independent Configurable Architecture for Reliable Operations of Autonomous Systems (ICAROUS)

- ICAROUS is a software architecture comprised of highly assured algorithms for building safety-centric, autonomous, unmanned aircraft applications
- Features
  - Detect and Avoid
  - Geofence Monitor
  - Obstacle Avoidance
  - Stand-off Distance
  - Return to Mission
- Additional Information
  - <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20170001936.pdf>

➤ **Safeguard is designed to monitor and enforce conformance to a set of operational rules defined prior to flight (e.g., geospatial stay-out or stay-in regions, speed limits, and altitude constraints).**

➤ **Features**

- Assures conformance to a set of constraints
- Based on simplex architecture
- Independent, autonomous system
- Can be configured for degraded GPS environments
- Formally verified algorithms
- Safety assurance emphasis
  - *current version developed to NASA Class B software standards (D207)*
- Approved for safety credit by LaRC ASRB

➤ **Additional Information**

- <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20170009617.pdf>

# Radar on Autonomous Aircraft to Verify ICAROUS Navigation (RAAVIN)

➤ Utilization of new airborne radar systems for DAA applications on sUAS

➤ Features

- DAA
- Radar

➤ Additional Information

- <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20190026497.pdf>
- George Szatkowski
- NASA LaRC Researcher
- [george.n.szatkowski@nasa.gov](mailto:george.n.szatkowski@nasa.gov)

- Display traffic alerts and maneuver guidance to manned aircraft pilots on a portable tablet device.

- **Features**

- ADS-B Traffic Input
- Ownship Aircraft State Data
- NASA developed DAA Software
- Traffic Alerts
- Maneuver guidance

- **Additional Information**

- <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20170005874.pdf>

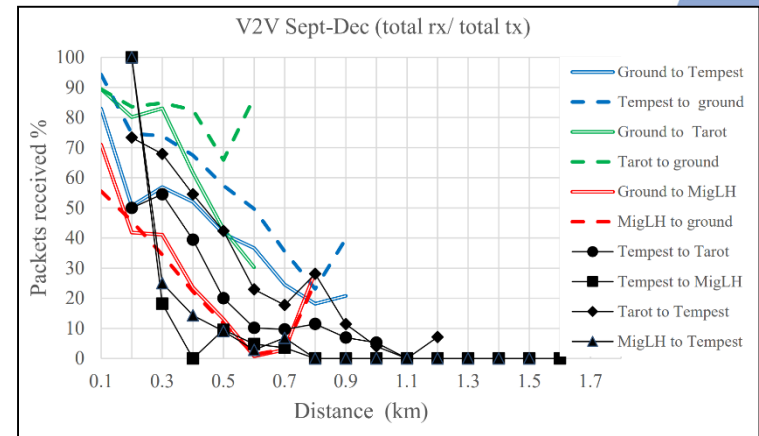

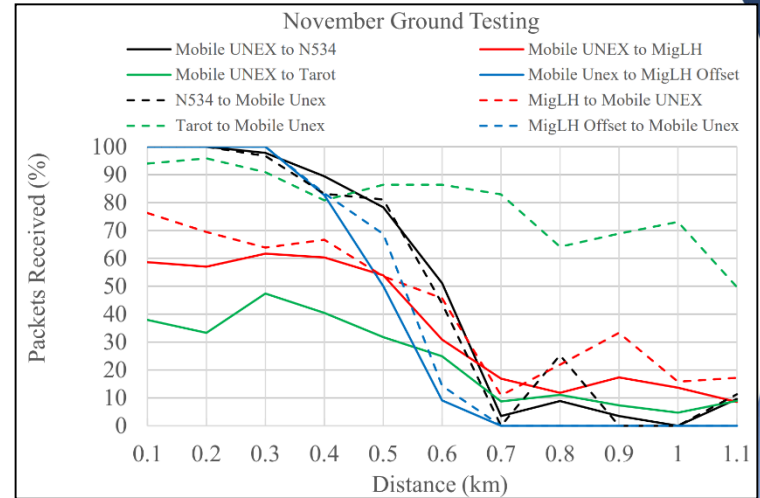

# UTM Enabling Vehicle Technologies

- **Dedicated Short Range Communications (DSRC)**
  - Systems for potential sense and avoid sUAS applications.
- **Features**
  - Vehicle to vehicle communications
- **Image-based Object Detection (IOD)**
  - Onboard non-cooperative SAA for sUAS utilizing visual-based sensors.
- **Features**
  - Machine Vision
- **Additional Information**
  - <https://ntrs.nasa.gov/archive/nasa/casi.ntrs.nasa.gov/20180003200.pdf>

# Human Detection System (HDS)

- Identify humans in the landing site prior to landing.
- Features
  - Machine Vision
- Additional Information
  - Dr. Loc D. Tran
  - NASA LaRC Researcher
  - [loc.d.tran@nasa.gov](mailto:loc.d.tran@nasa.gov)
